Abstract (en)

[origin: WO8606470A1] A fuse circuit for a missile (10) with a proximity fuse (11) which can be adjusted to different target distances (H1, H2). In order to combat in an optimum manner different target types (13, 14, 15) the proximity fuse (11) is equipped with a target sensor (17), which picks up characteristic target features and ensures that the proximity fuse (11) reacts either already at the distance (H1) or only at distance (H2) and detonates an explosive charge (10a).
