Abstract (en)
[origin: WO8606789A1] Two-stroke engine with controlled valves comprising at least one cylinder (2) having a combustion chamber (9) supplied with fresh air by means of a volumetric compressor and provided at its higher part (8) with at least one intake port (10) co-operating with one intake valve (11). This two-stroke engine is characterized in that its timing gear is effected, independently of the geometry of the cylinder (2), by means of controlled timing means (21). The invention relates to the industry of fuel engines.
