Abstract (en)
The hinge device with preset stable positions, particularly employable for furniture doors, room doors and shutters in general. The hinge device, comprises a male element and of a female element (6). The male element has a pivot (9) and on its lateral surface are provided one or more recesses (10, 11, 12) interacting with a sliding element (18) which is adapted for cooperation with the recesses (10, 11, 12). The sliding element (18) cooperates with an elastically deformable element (17) accommodated within a suitable seat (15) provided in a pin (7) adapted for associating the female element with a door. The sliding element (18) cooperates with the recesses (10, 11, 12) for defining one or more positions of elastic stability for the door.
