Abstract (en)

To solve the problem of fixing the top tile battens and the ridge tile of a sloping roof in the correct position relative to each other without the necessity for expensive corrective measures such as extra wooden blocks or sawing off the roof boarding at an angle, a brace or hood to be applied on the ridge of a sloping roof is provided with a nesting element (1) for the ridge board to support the ridge tile, and at least one leg (2, 3) extending from said nesting element for fastening to the roof boarding, said leg being provided with either a fastening part (4) for a top tile batten (11) or a replacement top tile batten (15).
