Abstract (en)
[origin: WO8606705A1] A disposable container (10) for shipping a hazardous or ultra-high purity liquid material, having a body of substantially vapor-impermeable organic polymer material, such as fluorinated linear high-density polyethylene, a bubbler tube (20) extending from the top of the container having an open end near the bottom of the container, a liquid level detector (30), and an outlet tube (24) on the top of the container having an open bottom end near the top of the container. A vapor-impermeable metal coating (14) is provided on the outside of the container by vapor deposition or sputtering. A frangible seal (36) is provided at the top of both the inlet tube and the outlet tube. A metal-coated polymer valve (40) is provided on the bubbler, having vapor-impermeable seals isolating the metal exterior from the metal interior, and also having means for rupturing the frangible seal.
