Abstract (en)
[origin: WO8600098A1] Method and apparatus for forming a patterned pile on a material which preferably comprises an optical sense means (200) capable of producing a first signal corresponding to a master pattern, a control means (119) for converting the first signal to a corresponding second signal which is an electrical signal corresponding to the master pattern, said control means (119) also controlling a tuft means (40) according to the second signal such that the tuft means (40) operates to form a pattern corresponding to the master pattern on a material.
