Abstract (en)
[origin: WO8606350A1] A re-closable packing for damp cloths in which a tear-off line is punched on the essentially flat upper surface, and which is covered by a closure flap that has a larger profile and sticks to the material of the top surface. Such a pack should be improved in such a way that the punched-out material strip covers the removal opening as accurately as possible when the packing is re-closed. For this purpose, the tear-off perforation line or punched line is not fully cut out, but forms a single-piece covering tongue connected with the upper surface. The punched-out sides (10, 11), which form the covering tongue (9), extend advantageously to a weld seam with which the closure flap is connected to the top surface of the packing.
