Abstract (en)

[origin: EP0221683A2] The device transports cross seated cigarettes (C), disposed in several layers one above the other, by means of transporters (A, B), which connect a cigarette producing line to a cigarette packing line. The transporters are made of a row of carrying links (1) fixed onto the central links of a three-row roller chain (2). The transporters are guided over driving chain wheels (11), guide chain wheels (10) and fixed guides (12-15). In a part of their length the transporters are oppositely parallel to define a space for carrying layer of cigarettes.
