Abstract (en)

A lamp assembly incorporating fluorescent tubes for lighting purposes, and a voltage unit for applying an electric voltage over the tubes. According to the invention two or more fluorescent tubes ( 1 - 6) are connected to the voltage unit (8) in series with one another. The voltage unit is constructed to deliver, during a tube ignition phase, a sufficiently high voltage with sufficiently high frequency to ignite the tubes (1 - 6) without requiring the heating of a device within the tubes, and which unit is constructed to deliver, subsequent to ignition of the tubes (1 - 6) a sufficiently high voltage with sufficiently high frequency to operate the ignited tubes (1 - 6).
