Abstract (en)
[origin: EP0221890A2] In a parallel vice, a plastic body (10) is inserted with prestress into a recess (11) in the housing (1) located above the rail (6) belonging to the movable jaw (7). The plastic body (10) has the form of a prism, the base of which is limited by two essentially parallel arcs (12, 13) which are connected at each of their ends by two straight lines (14, 15) arranged approximately at right angles. Two of these straight lines (15) are essentially in line with one another. By means of the longitudinal faces belonging to these straight lines (15), the plastic body (10) forming a spring bears with prestress against the top side (9) of the rail (6), in order to prevent any play between the rail (6) and housing (1). <IMAGE>
