Abstract (en)

[origin: EP0222091A2] 1. Sliding sash (8) designed in the form of a window, door or the like, and supported by at least two carriages (13, 14) which are displaceably guided in longitudinal rails (11, 12) on the frame side and each of which possesses a support arm (26) which can be pivoted transversely to the rail direction by means of the sash operating lever (9) and whose outer end engages on the sash, at least the carriage situated nearer to the upright of the sliding sash being equipped with a coupling member (19) which, in the closed position of the sliding sash, engages with a counter-closure on the fixed frame, characterized in that the counter-closure contains a locking pin (20), which is mounted to be able to move aside against spring loading in the direction of sliding and captures a counter-lock (19) forming the coupling member, a positioning pin (22) which can be springloaded in the same direction being adjacent to this locking pin (20).
