Abstract (en)
[origin: EP0222174A2] 1. Water-conducting household appliance, such as washing machine or dishwashing machine, with a service water feed hose entering into the lower region of the housing, which hose is connected at the inlet end with an electrically switchable valve and surrounding on its section outside up to the lower region of the housing by an upwardly closed and downwardly open outer envelope hose led at a spacing from it, with at least one electrically switchable valve arranged within the upper region of the housing, which valve is connected with the outlet end of the feed hose, and with a base pan constructed for the catching of leakage water, in which a leakage water monitoring device is arranged, characterised thereby, that the feed hose section (12) between the lower housing region and the upper electrically switchable valve (1) is likewise surrounded by an outer envelope hose (13), which is closed at the valve end and downwardly open above the base pan (8).
