Abstract (en)

[origin: EP0222284A2] A layer of heat-insulating panels (6) is placed on a base (4, 1, 2) and is provided with holes (10) at load-bearing points, for example, on a roof, at points located above the rafters (2). Suitable supporting bodies (12) made of insulating material are inserted into the holes (10) and are connected to the base, for example to the roof rafters (2). Thereupon, an outer covering (20, 22) is applied over the panels (6) and is connected to the supporting bodies (12). In this way, the supporting bodies (12) hold the insulating panels (6) on the base (4, 1, 2) with shearing resistance and carry the covering (20, 22). <IMAGE>
