Abstract (en)

[origin: US4789298A] The method and apparatus for controlling the operation of a turbocompressor which has a suction and a discharge with a blow-off valve for regulating the performance thereof includes a sensor in the suction and discharge for sensing an operating condition such as pressure and temperature which is connected to deliver to a comparator a performance signal for the control of the blow-off valve. The control signal which is delivered to the comparator is modified in accordance with a memory which includes a blow-off curve gradient which effects the amplification of the signal which is sent to a controller in accordance with the blow-off conditions which are to be set in motion on the basis of the performance characteristics which have been sensed.

Abstract (de)

Bei der Pumpgrenzregelung von Turbokompressoren wird der Verstärkungsfaktor der das Regelsignal für ein Abblaseventil (21) liefernden Reglers (19) entsprechend der zum jeweiligen Arbeitspunkt gehörenden Steigung der Abblaselinie variiert.
