Abstract (en)
[origin: US4802059A] In a low-voltage circuit breaker, terminal points for connecting contact arrangements to stationary bus bars are provided. Between the terminal points and the stationary bus bars, connecting bars are arranged which are braced relative to the housing of the circuit breaker by support bodies against current forces. The support bodies are parts comprising relatively thin insulating material with cutouts for the connecting bars. Detent projections allow the support bodies to snap into corresponding recesses in the lateral housing walls of the circuit breaker.
