Abstract (en)  
[origin: FR2582331A1] Water flushing particularly intended for toilets as well as street urinals for animals. According to the invention, the water flushing has a fully automated operation cycle and is comprised of: an upper (2) and lower (3) container, means for the transfer (4) of the content from the up-stream container (2) to the down-stream container (3); means for filling (5) the up-stream container (2) from the water supply network (6); means for evacuating (7) the content from the down-stream container (3) to the bowl to be cleaned. The control device (20) actuates in the first place the transfer means (4) for transferring the content from the up-stream container (2) to the down-stream container (3), and in the second place actuates the filling means (5) to fill the up-stream container (2) and the evacuation means (7) to evacuate the down-stream container (3).
