Abstract (en)

[origin: US4743210A] A pass-through terminal arrangement to be mounted on and extended through a mounting opening of a wall of a casing in a mounted position thereof includes a plurality of terminals each of which includes a terminal housing and a current bar having a projecting portion which extends out of the terminal housing and, in the mounted position, through the mounting opening into the interior of the casing. A sealing component is mounted on and surrounds a section of the projecting portion of each of the current bars. The terminal housings are connected in a row to a flange frame of a mounting flange which further includes a pass-through block rigid with the flange frame, at least partially received in the mounting opening in the mounted position, and having a plurality of pass-through openings each for sealingly accommodating at least the section of one of the current bars and the sealing component mounted thereon. The mounting frame is secured to the wall, and a seal is interposed between the flange frame and the wall in the mounted position.

Abstract (de)

Bei dieser Durchführungslemmenanordnung werden die Stromschienen (12) mit Dichtungsstücken (14, 15) in abgedichteter Form in Durchführungsöffnungen (7) eines Durchführungsblocks (2) eines Montageflansches (1) angeordnet, wobei die Klemmengehäuse (10) formschlüssig auf den äußeren Bereich (4) des Flanschrahmens (3, 4) aufgeschoben werden. Die montierte Baugruppe aus Klemmen und Montageflansch (1) wird mit dem Durchführungsblock (2) durch eine Öffnung in der Wand eines nach außen abisoliert zu haltenden Kastens gesteckt, und zwar unter Zwischenlegung einer Umdichtung. Die Baugruppe wird durch Einsticken einer Schnellverschlußspange (9) in Stecksschlüsse (8) des Durchführungsblocks (2) im Inneren des Kastens festgesetzt.
