Abstract (en)  
[origin: EP0223886A1] The present specification relates to flexible containers having an aperture through which the container is filled or dispensed, the container having a flexible flap overlying the aperture so as to seal the the container once filled. The container in accordance with the present invention being arranged such that the flap is attached to the oontainer so as to form a chute by arranging two divergent weld lines on opposite sides of the aperture to assist in directing material into the container during filling.
