Abstract (en)  
[origin: EP0223897A1] 1. A fastening device for rails, particularly for crane constructions or the like with a clamping plate (14) comprising a clamping portion (15) adapted to downwardly abut on the rail base and an abutment portion (19) laterally abutting on the rail base and a circular bore (21) in which an eccentric disc (23, 23') comprising an engaging surface (25, 26) for a tool is arranged, the eccentric disc comprising an eccentric bore for a screwbolt (27) to secure the clamping plate at a sole plate (17) and with a clamping disc (29) comprising a bore for a screwbolt (27) the clamping disc being adapted to be pressed against the upper side of the clamping plate (14) by the screwbolt (27), the clamping plate being defined such that it is displaceable with regard to the screwbolt (27) on the sole plate (17), characterized in that the clamping plate (14) comprises an approximately S-shaped contour in lateral view, the abutment portion (19) comprises a single flat underside and the circular bore (21) in the abutment portion extends up to the underside.
