Abstract (en)
[origin: EP0223938A1] 1. Belt store, in which at least one belt reel having a central passage opening (4) has in the latter at least one bearing insert (6), which is provided with a pivot bearing surface (10) roughly coaxial to the reel axis and formed by an external circumferential surface for the rotary mounting of the belt reel on an angular bearing (3), the pivot bearing surface (10), whose diameter is at least approximately as large as the internal diameter of the passage opening (4), is essentially formed by an axial extension of the bearing insert (6) and in particular two separate pivot bearing surfaces (10) are located on either side outside the end faces (5) of the belt reel (2), characterized in that the belt reel (2) is formed by a wound abrasive belt and that the pivot bearing surface (10) is formed by the axial extension of a plug-in surface engaging in the inner face of the passage opening (4), bounded on at least one side by a collar (8, 9) and arranged in such a way that it is approximately adjacent to the end face (5) of belt reel (2).
