Abstract (en)
[origin: WO8607407A1] In a roller blind comprising an armour (3) having lamellae (4, 4'), which may move in guiding rails (5) throughout the deployment length and may be rolled on or by a take-up roll (2) arranged in a roller blind housing (1), the fabric or grid blind (6) wound on a roll (7) under the tension of a spring is fixed at the last lamella (4') at the free end of the armour (3). Said blind (6) is arranged in a blind housing (8) provided under the last lamella (4') of the armour (3). The blind housing (8) may be displaced throughout the deployment length (L) of the armour (3) and is lockable in position at any desired height by means of a stop mechanism (10, 11), the spring tension maintaining it, when unlocked, in set contact with the last lamella (4').
