Abstract (en)

1. An axial-thrust equalizer (5, 6) for a liquid pump, the equalizer mainly comprising a stationary sleeve (5) and, rotating therein, a dummy piston (6) rigidly secured to the pump rotor shaft, characterized in that the sleeve (5) is formed with ducts (51, 52) for guiding out of the rotor side chamber (31) contiguous with the equalizer a flow (Q) of working liquid moving towards the dummy piston (6), the flow (Q) dividing, at the place (53) where the ducts (51, 52) join the gap (56) between the sleeve (5) and the dummy piston (6), into two flows (Q1 , Q2) moving towards the two gap ends.
