Abstract (en)
[origin: EP0224863A2] The plastic closure for metal or plastic containers has a plastic ring (11), which can be mounted on the container opening, with a pouring spout (2) and has at least one aeration channel (4) which is arranged at least partially in the region of the pouring spout (2). For increasing the operating safety, better functioning and simpler and less expensive producibility, provision is made for the aeration channel (4) to extend at least over the greatest part of the length of the pouring spout (2) and for the aeration channel (4) or its walls to be connected integrally with the pouring spout (2). <IMAGE>
