Abstract (en)
[origin: EP0224920A2] The known washing plants for gravel or the like have the great disadvantage that the struts and transport arms welded into the washing shaft (11) can, after they are worn out, only be replaced with new components with a large degree of technical outlay. Therefore, the invention is based on the object of making it easier to change the worn-out struts (12) and/or transport arms in such a way that they can be changed in a short time. This is achieved in that the struts and the transport arms can be plugged on, slid on or screwed on to the washing shaft so that even with the washing shaft installed they can be changed rapidly and without special aids. <IMAGE>
