Abstract (en)
[origin: EP0225417A1] 1. A vibrating grinding machine with a container (1, 27) for receiving the mass to be vibrated and a generator of vibrations (28), an internal piece comprising at its periphery means for influencing the mass to be vibrated and capable to move independently of the container being disposed in the middle region of the container, characterized in that the internal piece is an internal jacket (10, 31) freely mounted, not participating or only to a strongly damped extend to the vibrations of the container and the means (11, 12, 14, 15, 16, 16K, 17, 20) mounted at its periphery being arranged in order to brake the mass to be vibrated.
