Abstract (en)

[origin: EP0225621A2] In a cleaning unit made of a packaging bag (2) and a cleaning cloth (3), which is arranged folded in said packaging bag and is soaked with a cleaning liquid, the bag (2) is closed by means of a reclosable closure (4), which extends over its entire width and is only accessible from one flat side of the bag, in such a way that avoids escape of cleaning liquid when the closure (4) is closed. The cleaning cloth (3) can thus be folded again after use and kept closed in the bag for later reuse. The folded cleaning cloth (3) forms a spacer between the bag walls (5, 6) so that hollow chambers (19), adjacent to the outer edges of the folded cleaning cloth (3), remain free for absorbing any excess cleaning liquid. <IMAGE>
