Abstract (en)
[origin: EP0225931A1] 1. Fixing system for a roof covering or wall facing consisting of self-supporting elements (1) of U-shaped cross-section which, disposed side by side in parallel relationship, inter-engage by beaded edges (3, 4) of different thicknesses formed on their upright limbs by outward bending and are supported by holders (5) which extend into each of the inter-engaging beaded edges between associated adjacent elements, said holders (5) being fixed at distances corresponding to the width of an element on members (8) disposed transversely to the longitudinal direction of the elements, an insulating base (9, 15, 21-23, 25, 30) being disposed beneath each holder (5), characterized in that a plurality of insulating bases are strung together, being connected by material in strip form, at constant distances from one another corresponding to the width of a roof covering or wall facing element (1) and are disposed between the member (8) and the holders (5) and the constant distances for mounting the holders are marked by the insulating bases (16, 22, 28) themselves or by abutments (10, 11, 29, 33) or screw holes (12) in the strip material.
