Abstract (en)

[origin: EP0226036A1] A method for lining a pipe such as a sewer pipe (15) comprising applying to the interior of the pipe (15) a layer (16) of a settable composition comprising a mixture of one or more organic resins with one or more inorganic filling materials, thereafter covering the surface of the said layer (16) with sheet material (17) and thereafter compacting the said layer (16) onto the pipe (15) by exerting pressure thereon through the sheet material (17), the sheet material (17) being in the form of a tube of polyethylene film or other polymeric film and in that the tube is removed after the pipe lining composition has at least partly set by pulling one end thereof through the interior length of the lined pipe (15).
