Abstract (en)

[origin: US4809682A] An underwater electrodes assembly for contactless lithotripsy is suggested wherein two electrodes have tips facing each other across a narrow gap and at least one, preferably both, electrodes are surrounded by sleeves or rings made of a dielectric material, such as a thermoplastic.

Abstract (de)

Unterwasser-Elektrode für die berührungsfreie Lithotripsie, wobei sich die Elektroden spitzen einander gegenüberliegen und an mindestens einer Elektroden spitze (6, 16) eine Hülse (20) oder ein Ring (32) aus dielektrischem Material angeordnet ist, um einen optimalen Verlauf der Feldlinien zu bewirken.
