Abstract (en)
[origin: EP0226108A2] 1. Aqueous preparation for the finishing of leather and for textile coating based on a carboxyl-containing polymer as binder and a 1,2-polyepoxy compound as crosslinking agent, which may contain customary auxiliaries and additives, characterized in that the binder is a copolymer of monoolefinically unsaturated monomers having an acid number of 5 to 150 mg of KOH/g of substance and/or a polyurethane having an acid number of 5 to 150 mg of KOH/g of substance and, if desired, base-digested casein and that the 1,2-polyepoxy compound is a polyglycidyl triazolidine-3,5- dion having an epoxy number of 0.2 to 1.12.
