Abstract (en)

Device for assembling various types of connector housings (39,57,62,66), to wit filling the cavities of the housing with contacts (40,54,60,67) in the form of a pin or a spring or socket, said device executed as a traverse system with a number of parallel feeding tracks (52) for connector housings (39,57,62,66) which are intermittently supplied in the longitudinal direction of the feeding tracks (52), above which connector housings and transverse to the longitudinal direction of the parallel rows of these a carrier (44,45,46,53,59,65'), carrying pin or spring contacts (40,54,60,67) is moved intermittently either regularly or irregularly so that a contact (40,54,60,67) from said carrier (44,45,46,53,59,65') can be brought into the desired cavity of a connector housing (39,57,62,66) if such cavity is present below a contact.
