Abstract (en)  
[origin: EP0226682A1] 1. Hospital stretcher-carrier comprising a moving base (2-3) resting on the floor and a structure (5-6-10-11-12) intended for bearing patient's body, the level of which can vary with respect to the floor, characterized in that said structure comprises a beam (6-12) extending in the longitudinal direction of the carrier and a plurality of substantially rigid tables (10-11), supported only by said beam (6-12) and able to slide on both sides of the beam substantially orthogonally to the centre line of said beam (6-12), the beam (6-12) being connected to the base by a means for adjusting (4-5) the level with respect to the floor.
