Abstract (en)  
[origin: EP0226695A1] 1. A jack for motor vehicles, having a horizontal base part with side walls, between which is arranged a threaded spindle which at one end is supported non-displaceably on the side walls so as to be rotatable by way of a spindle bearing and which at the other end receives a nut member which is guided displaceably in the side walls by way of pins and on which engages one end of a cantilevered work arm which is connected approximately in its centre to a support arm in an articulated manner which is articulated on the base part, characterized in that the base part (1) has a U-shaped cross-section with vertical side walls (2 and 3) in which are provided horizontal, slightly S-shaped guide slots (12) in which the pins (11) or the nut member (10) are guided.
