Abstract (en)
[origin: EP0226850A1] 1. An apparatus for the continuous mixing of dry mortar with water at a building site, more particularly for mechanical plastering, comprising a supply bin (3) for the dry mortar connected to an intermediate tank (11) containing a fragmenting appliance (15), a mixing chamber (12) having a water supply beneath the intermediate tank (11), and a pump (14), more particularly an eccentric worm pump (14), connected to the mixing chamber for the removal of the mixture, characterised in that a sealable connection piece (31) is provided on the side of the intermediate tank for an additional apparatus (20) which is adapted to be attached to said apparatus if required, said additional apparatus (20) consisting of a supply bin (24) for an aggregate and a continuous conveyor unit (25-29), which leads out of this supply bin (24) into the intermediate tank (11).
