Abstract (en)
The present invention relates to a ski boot with a foot securing device (1) which comprises a shell (2) to which at least one quarter (3, 4) is associated. The peculiarity of the invention resides in the fact that it comprises at least one securing tension element (10) which extends, at least partially, within the shell (2) and is connected to traction members (15a, 20-22, 24, 25) adapted for varying the useful length of the tension element (10) inside the shell (2), and being activatable by the oscillation of the quarter (3, 4) with respect to the shell (2) and provided with a locking apparatus (26, 27) for the operative uncoupling of the lever (20) from the oscillation of the quarter (3, 4). Removable locking members (30-32a, 34, 35) are furthermore provided for slackening the tension element (10).
