Abstract (en)

[origin: EP0227032A2] Rabitz-type pincers with two handle legs (11, 12), each having a jaw bit (14, 15), are connected by means of a pivot joint (13). According to the invention, in a handle region (17) corresponding approximately to a hand width, the shape of the handle legs (11, 12) is chosen so that their outer contour (18) corresponds approximately to the form of an ellipse (19). The handle region (17) is clearly separated from the remaining region of the pincers by an indentation. <IMAGE>
