Abstract (en)

[origin: WO8700137A1] A containership having a super structure which comprises a hull, a container bearing deck (2) located beneath the water line, side walls (3, 4) which extend upwardly from the container bearing deck (2) to define a container hold (5) located within the hull. At the top of the walls is a strength deck (8) whose position approximates the position of the uppermost row of containers (9) when the ship is fully laden. The elongated sidewalls (3, 4) restrain the containers and provide a weathershield.
