Abstract (en)
[origin: EP0228594A2] An assembly safeguard fixes the actuating rod non-displaceably relatively to the face plate, until the last fastening screw retaining the unit on the window part is tightened. Care is taken to ensure that a blocking element is necessarily broken off at a predetermined breaking point by the fastening screw and is brought into and secured in a position in which it is out of contact with the actuating rod. <IMAGE>
