Abstract (en)

[origin: EP0229260A2] The closure sleeve and the anchoring ring are constructed as force-introducing elements and can be connected to each other, for example by welding or bonding. Furthermore, they can be inserted fixedly in the plastic of the container. Finally, according to a further embodiment, the container lid can engage in the closure sleeve inside the container. Furthermore, only one seal may be required, namely arranged between the tank lid and the tank container neck. <IMAGE>
