Abstract (en)
[origin: EP0229274A2] In a ski boot, there is arranged on the rear side of the sleeve rear side a clamping buckle arrangement which brings two cable loops to clamping operation. The clamping buckle arrangement comprises a pivot lever which is mounted on a slide plate. To adjust from a downhill position into a walking position, the pivot lever is mounted on the slide plate to provide an articulated flap which can be adjusted into two oppositely directed positions folded onto the slide plate. <IMAGE>
