Abstract (en)

[origin: EP0229875A2] The apparatus is for the preparation of suspensions or solutions using a mixing tube, from where the liquid/powder mixture is fed to various chambers. An essential feature here is that the mixing tube opens into a proportioning channel, which is arranged above the vertical separating wall between two neighbouring chambers and that this proportioning channel is pivotably mounted, so that the mixture can be directed into one or the other chamber, according to choice. <IMAGE>
