Abstract (en)
[origin: EP0229908A2] 1. Link band, especially a watch bracelet, with link rows comprising band links situated one beside the other in the transverse direction of the band, the mutually adjoining band links of a link row forming gaps and projections and being offset in each case by half their length relatively to one another in the longitudinal direction of the band, and the projections of one link row projecting into the gaps of the neighbouring link row, with joint pins which project through recesses, extending in the transverse direction of the band, in the two band link ends directed in the longitudinal direction of the band, and are secured against axial displacement, and at least one end of the joint pins has, at its region projecting into the recess of the outer band link, at least one radially resilient retaining arm, characterised in that there is arranged on the radially resilient retaining arm a radially projecting retaining catch (11) which is adapted to catch in a corresponding retaining recess (12, 12') in the wall of the recess (4) of the outer band link (1, 1') and is lockable in the catching position.
