Abstract (en)

[origin: EP0230555A2] The cooking appliance heating element, preferably in thick-layer paste technology, has heating conductor paths applied in one or more planes on a carrier. According to the invention, the cooking appliance surface is divided into zones of different heating power and, to be precise, into at least one boiling-heating zone with a high heating power and into at least one normal cooking heating zone with a low heating power.
