Abstract (en)  
[origin: EP0230595A1] The invention relates to a refrigerating circuit for coffins, of the type comprising a compressor (10), a condenser (12), one or more evaporating valves (16), and an evaporator (26) in a situation of heat exchange with the interior of the coffin. In order to avoid any trouble when the refrigerating circuit is disconnected, the evaporator (26) is in the form of a disposable element fitted with rapid attachment (22, 23) for its connection and disconnection with the remaining circuit parts.
