Abstract (en)  
[origin: EP0230643A2] A safe (10) has a plurality of receiving units (22, 24, 26, 28, 30, 32, 34) which are arranged in a housing and which can be guided continuously past an orifice (16) made in the housing surface (14). The orifice (16) is closed by means of, preferably, a double-flap mechanism, via which the associated receiving unit, in which, for example, securities, such as bank notes and coins, can be introduced, is completely or partially accessible. <IMAGE>
