Abstract (en)

[origin: US4733779A] A package for slabs of butter of the type including a lower tray part and an upper tray part wherein the lower tray part does not have any edges protruding beyond the plane of a middle butter support field so that the butter can easily be cut into portions with a knife. The upper tray part, with its edge, engages a continuous furrow in the edge region of the lower tray part, where it is retained by friction. The slab of butter is covered with a wrapper material on its five sides above the support side on the lower tray part. The butter is thereby protected both mechanically and physically and it is very convenient to remove servings thereof.
