Abstract (en)

[origin: EP0230862A2] The washing bottle has a squeezable container (3) to which a nozzle head (9) is attached. The latter has nozzles (10, 12, 13) whose axes are inclined at an angle (α) to the axis (11) of the nozzle head (9). This enables the entire inside surface (15, 16, 17) of the hollow profile (18) to be sprayed with the liquid at least to the greatest extent in one operation. <IMAGE>
