Abstract (en)  
[origin: EP0231135A2] 1. A box pallet comprising a container (11, 11') of the American case type comprising a base formed of two outer flaps (12, 12') attached by fold lines to two parallel walls (13, 13') and optionally lined by two inner flaps (14, 14') attached to the other two walls, tongues (15, 15'; 16, 16') being cut in said outer flaps (12, 12') with a view to engagement in the ends of and/or slits in associated sleeves arranged perpendicularly to said parallel walls, said sleeves receiving reinforcing blocks (18, 18') of a rigid material, which firmly connects said outer flaps and said sleeves through the intermediary of said tongues, this box pallet being characterized in that said sleeves consist of two independent half sleeves (17, 17') which, after opening of the box pallet, are arranged end to end and firmly connected respectively with said outer flaps (14, 14') through the intermediary of said tongues (15), each half sleeve receiving an independent reinforcing block (18), said half sleeves either being independent or attached in pairs by the wall to be applied against said flaps, with a transverse fold line (20') formed in said wall between said half sleeves.
