

Title (en)

Processing system for the detection, control and diagnostic examination of the operating conditions of the internal combustion engine of a motor vehicle, particularly a commercial motor vehicle.

Title (de)

Verarbeitungssystem zur Erfassung, Steuerung und diagnostischen Prüfung des Betriebszustandes einer inneren Verbrennungsmaschine eines Motorfahrzeuges, insbesondere eines gewerblichen Motorfahrzeugs.

Title (fr)

Système de traitement pour la détection, la commande, et l'examen diagnostique des conditions de fonctionnement d'un moteur à combustion interne pour véhicule à moteur, au particulier de type commercial.

Abstract (en)

The processing system comprises a plurality of sensors (2), each of which detects a corresponding physical magnitude indicative of the operating conditions of the engine (M) and generates a respective detection signal, and a processing unit (3) which receives the detection signals. The processing unit comprises five processing modules (91 to 95) intended respectively to control the following functions: detection of the operation of the engine in conditions that are abnormal or harmful to the life of the engine itself (91); limitation of critical uses of the engine (92); monitoring of the operating conditions (93); updated detection of the maintenance operations to be carried out on the engine (94), and diagnosis of unsatisfactory engine performance (95).
