Abstract (en)
[origin: WO8700979A1] Prefabricated electric connection device for link on a set of bars which extend parallel to each other. Said device is characterized in that the bars (1, 2, 3) parallel between each other are situated one after the other in a direction perpendicular to the planes of the bars. Intermediate connection members (4, 5, 6) each provided with an external isolating sheath (11) are respectively fixed to the bars (1, 2, 3) and extend forwards perpendicularly to said bars (1, 2, 3); the bars are drilled with aligned holes (13) through which extend, with interposition of an isolating sheath (11), the intermediate connection members (5, 6) fixed at their back ends to the bars (2, 3) situated behind the first bar (1).
